

# Malaria Deaths in Africa: 2000-2014

## 1. Democratic Republic of the Congo:

The above graph shows the deaths in the Democratic Republic of the Congo due to Malaria for the period between 2000 and 2014. On the map on the right side, I clicked over “the Democratic Republic of the Congo”, which updates the bar chart on the left. The chart shows that before 2004, the average number of Deaths was very low, below 5000 deaths per year. Starting from 2004, there was a dramatic increase in the deaths numbers due to Malaria. The number of deaths at least tripled, with an average more than 15000 deaths per year.

## 2. Kenya:

The graph shows the death cases numbers in Kenya, due to Malaria disease between the years 2000 and 2014. I clicked on “Kenya” location on the map, which reflected on the numbers on the chart. The graph clearly indicates that the number of Deaths between 2000 and 2003 was high, around 47000 cases per year. In 2004, the numbers decreased by around 50%, recording the number of deaths of 25000 cases this year. The deaths increased again in 2005 recording 45000 cases, and keep decreasing gradually till 2010 with 25000 cases again. From 2011 till 2014, there was a major decrease in the recorded death with around 1000 recorded cases per year.

### 3.South Africa:

Overall between 2000 and 2014, death cases per year due to Malaria in South Africa are very low compared to the average death cases in Africa . updating the dashboard by clicking on South Africa on the map, giving a close view of the number of deaths in South Africa. However, the year 2000 has the highest number of deaths with 400 cases. Between 2001 and 2013, the number of recorded cases was below 100 cases per year. In 2014, there were 200 recorded death cases. In Conclusion, South Africa's average deaths due to Malaria (106 cases/year) is way less than Africa deaths due to Malaria (1,303 cases/year).
